

Server Security

Protection may block heavy users

The server has recently been subject to attack from intruders. Due to a firewall the server remains fully protected. The need for strict protection means that some heavy users may experience connection problems.

Normal data traffic in ProMISe is not affected, however users performing a large number of downloads may become blocked due to automatic security measures.

If this occurs please email shelley.taylor@ucl.ac.uk

Overview: New Feature

In the Layout Options of the Overview screen you can now choose whether to obey or ignore the active Item Selection.

This allows you to view all items in the database for an individual record regardless of the active item selection.

This is particularly useful for data checks, or analysis involving more than one disease or transplant type.

How to obtain Overviews

([Data Reports](#): Link to the Overview screen by clicking on a UIC in Data Listings)

([Data Entry](#): Link to the Overview screen by clicking on the following icon):

Internet Explorer Settings

Improves Speed

It is very likely that you will notice an improvement in the speed of ProMISe if you include the web address in **Trusted Sites** in the Internet Explorer security settings.

Instructions:

Open Internet Explorer

Go to menu Tools – Internet Options

Select the 'Security' tab

Click on the Trusted Site Option

Click on the [Sites...] button

In the first box type: www.clinicalresearch.nl

Ensure you have no spaces after the address

(Ensure the server verification box is not ticked)

Click [Add] and [OK] then close your browser.

When you next log in to ProMISe you will see this symbol in the bottom right of the screen. You can verify that the server has been correctly added to your list of trusted sites.

The server is highly protected and adding it to the trusted sites does not affect security in any way.
